Update the app to support account deletion. Once account deletion has been added, or if it is already in place, reply to this message with a screen recording captured on a physical device that demonstrates:

- Creating a new account or signing in with the demo account
- Navigating to the account deletion option
- The complete account deletion flow from initiation to confirmation

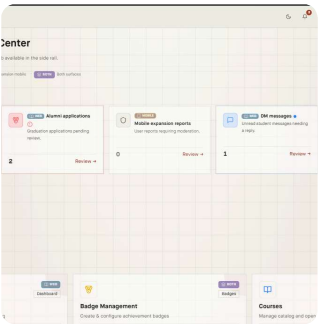

Include the recording in the Notes field of the App Review Information section in App Store Connect for future submissions.

"What industry are you in?" - Look at adding another option. I didn't see a tech industry.

Onboarding: Initially didn't recognize a difference between the "what you already know" and when it switched to "What you want to learn". Realized I was on a different screen after seeing text at the top was different.

Dashboard button at the start on the opening app was too dark for legibility.

Lesson1: Scroll arrows on the side don't do anything

When you add something to the cart, there are no response signal that the item has been added to my cart. - I had to scroll up to the top to see that my cart had items in it. Maybe a checkout popup with a keep shopping option.

Perhaps look at the check-out page as a separate tab, so that you're not completely exited out of the app if you abandon your cart.

The "View my Application" button from the email didn't take my to anywhere specific, just to the general dashboard page.

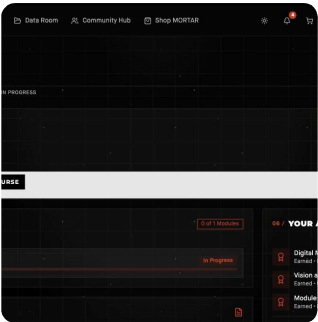

You can't click on the badges that you've earned.

I hit "reject" and the pop-up window came up and when I hit "cancel" it still rejects the person. There's also no way to change the rejection without the person reapplying - if there was an accidental rejection it'd be helpful to have that option
